

homeup.sg

SEO / GEO / AEO Audit Report

FULL AUDIT

SEO 5 On Track	GEO 5 On Track	AEO 4 Needs Work
---	---	---

7 June 2026

Claude Skill and Plugin by Alex Labat

Executive Summary

HomeUP.sg is a well-positioned Singapore property agency with a clear and differentiated value proposition -- fixed-fee selling at transparent price points. The site's core service pages (Sell HDB, Sell Condo, Sell Landed) are impressively deep, ranging from 3,500-4,500 words with FAQs, process breakdowns, and credentialed agent profiles. This content depth is a genuine competitive advantage that many rivals lack.

However, a cluster of technical gaps is preventing this content from performing to its potential. Meta descriptions are absent on every page crawled, directly suppressing click-through rates. There is no schema markup anywhere on the site -- a critical miss given the rich FAQ content, agent profiles, and local business data that would qualify for rich results immediately. Canonical tags and Open Graph tags are also missing site-wide. Fixing these three issues would represent the highest-leverage SEO work available to HomeUP right now.

Dimension	Score	Status	Key Takeaway
SEO	5/10	On Track	Good content depth and URLs; technical gaps (meta descriptions, canonicals, OG tags, schema) cap performance.
GEO	5/10	On Track	Named agents with CEA numbers and transaction history build E-E-A-T; no Organization or Author schema to declare the entity to AI engines.
AEO	4/10	Needs Work	FAQ content exists on three pages but has no FAQ schema; blog question-headings are good but lack direct answer paragraphs; no HowTo or Speakable schema.
Combined	14/30		Strong editorial foundation; technical layer needs systematic attention.

Pages Audited

URL	Page Type	Notes
https://homeup.sg/	Homepage	Strong H1, good title, ~2,400 words
https://homeup.sg/about/	About	Missing meta description; H1 present
https://homeup.sg/services/	Services Overview	Meta tags not rendering; H1 present
https://homeup.sg/sell-hdb/	Sell HDB	~3,800 words; FAQ section; no schema
https://homeup.sg/sell-condo/	Sell Condo	~3,400 words; FAQ section; no schema
https://homeup.sg/sell-landed/	Sell Landed	~4,500 words; FAQ section; no schema
https://homeup.sg/property-listing/	Property Listing	H1 is "SELL WITH CLARITY" -- weak
https://homeup.sg/articles	Articles Index	Title too generic; no H1 detected

https://homeup.sg/property-flipping-in-singapore-upgrading-strategy/	Blog: Property Flipping	Title 90+ chars; no schema; ~1,900 words
https://homeup.sg/minimum-occupation-period-upgrading-strategy/	Blog: MOP Upgrading	No schema; ~1,900 words; good Q-headings
https://homeup.sg/bridging-loans-in-singapore/	Blog: Bridging Loans	No schema; ~1,900 words; good Q-headings
https://homeup.sg/agent/dennis-lim/	Agent: Dennis Lim	224 transactions cited; no Person schema
https://homeup.sg/agent/yeo-tong-boon/	Agent: Yeo Tong Boon	\$150M+ transactions; no Person schema
https://homeup.sg/agent/olivia-neo/	Agent: Olivia Neo	Thin content; no credentials depth

SEO Analysis -- 5/10 On Track

Technical On-Page

Signal	Finding	Status
Title Tag -- Homepage	"Fixed-Fee Property Agents for Upgraders in Singapore HomeUP" -- 58 chars, keyword-rich, compelling.	Good
Title Tag -- Service Pages	Sell HDB, Sell Condo, Sell Landed pages all have strong, specific titles with price points included.	Good
Title Tag -- Blog Posts	Property Flipping and MOP post titles exceed 80 characters each. Google truncates above ~60 chars, cutting off the brand name.	Needs Attention
Title Tag -- Articles Index	"Articles - HomeUP" is generic -- no keyword signals or search intent captured.	Needs Attention
Title Tag -- Agent Pages	Titles are just the agent name followed by "- HomeUP". Missing keywords like "CEA agent Singapore" or property type.	Needs Attention
Meta Description	Missing on every single page crawled -- homepage, all service pages, blog posts, and agent profiles. This is the single highest-impact gap on the site.	Missing
H1 Tag	Present and well-optimised on homepage and all three service pages. Services page, blog posts also have appropriate H1s.	Good
H1 Tag -- Listing Page	"SELL WITH CLARITY" is a marketing slogan, not a keyword. Should be something like "Singapore Properties for Sale HomeUP Listings".	Needs Attention
H1 Tag -- Articles Index	No H1 detected on the articles index page -- Google cannot determine the primary topic.	Missing
Heading Hierarchy	H2/H3 structure is logical and keyword-relevant across service pages. Blog posts use question-format H2s which is excellent.	Good
Canonical Tags	Not detected on any page crawled. Without canonicals, Google must guess which URL to index -- risk of duplicate content diluting rankings.	Missing
Open Graph Tags	No og:title, og:description, or og:image found on any page. Social shares will display unstyled previews, reducing click-through from LinkedIn/Facebook.	Missing
Twitter/X Card	No twitter:card meta tags detected site-wide.	Missing

Robots Meta	Not detected in fetched content, but robots.txt correctly allows all crawlers with only /wp-admin/ blocked. Likely indexable; confirm via Google Search Console.	Needs Attention
URL Structure	All URLs are clean, readable, and keyword-relevant. /sell-hdb/, /sell-condo/, /sell-landed/ are well-structured.	Good
Image Alt Text	Cannot verify via HTML fetch -- use browser DevTools or Screaming Frog to audit all image alt attributes across the site.	Needs Attention
Internal Linking	Strong internal linking across all service pages and blog posts. Footer and navigation provide consistent cross-links.	Good

Content Quality

Signal	Finding	Status
Word Count -- Service Pages	Sell HDB ~3,800 words, Sell Condo ~3,400 words, Sell Landed ~4,500 words. This is exceptional depth for a local service business.	Good
Word Count -- Blog Posts	All three posts sit at ~1,800-2,000 words each. Solid for educational content, though pillar posts targeting high-volume keywords should ideally reach 2,500+.	Good
Word Count -- About / Agent Pages	About page ~1,300 words (adequate). Olivia Neo and other junior agent profiles appear thin -- limited unique content beyond boilerplate.	Needs Attention
Keyword Coverage	Primary keywords well-represented: "sell HDB Singapore", "fixed fee property agent", "sell condo Singapore". Good semantic clustering around upgrading, CPF, ABSD, MOP.	Good
FAQ Content	Service pages each contain 11-12 FAQs covering fees, process, track record, and myths. This is high-value content that is not yet marked up with schema.	Good
Blog Article Quality	Articles are well-written, educational, and on-topic for the target audience. They address real pain points (MOP confusion, bridging loan misunderstanding, flipping obsolescence).	Good
External Citations	Blog posts do not cite any external data sources, government publications, or MAS/HDB statistics. Adding cited data would improve credibility for both users and AI engines.	Needs Attention
Content Freshness Signals	Blog post publication dates are visible (May-June 2026). Service and core pages do not show update dates -- adding "Last updated" signals freshness to Google.	Needs Attention
Readability	Content uses short paragraphs, bullet points, and clear subheadings throughout. Easy to scan on mobile.	Good
Blog Author Attribution	"HomeUP (Marcus Lian)" is listed as author on blog posts but Marcus Lian does not appear in the team/agent section of the site. This creates an E-E-A-T mismatch.	Needs Attention

Structured Data

Signal	Finding	Status
Organization Schema	Not present anywhere on the site. This is the foundational schema type that declares brand identity, logo, contact, and social profiles to search engines.	Missing

LocalBusiness Schema	Missing. HomeUP has a physical office address (125A Lor 2 Toa Payoh), phone number, and business hours -- all LocalBusiness schema fields -- but none are marked up.	Missing
FAQ Schema	Missing on all three service pages despite 11-12 FAQs each. Adding FAQ schema to Sell HDB, Sell Condo, and Sell Landed pages would immediately qualify for rich result FAQ accordions in Google.	Missing
Article Schema	Missing on all three blog posts. Article schema with author, datePublished, and dateModified is a baseline requirement for blog content to surface in Google's Top Stories and AI-generated answers.	Missing
Person / Agent Schema	Five agent profile pages exist with CEA license numbers and transaction histories -- ideal for Person schema -- but no markup present.	Missing
BreadcrumbList Schema	No breadcrumb schema. With a clear site hierarchy (Home > Services > Sell HDB), breadcrumbs in search results would improve navigation signals.	Missing
Sitemap Coverage	Sitemap index correctly lists post, page, agent, and local sitemaps. All key pages appear indexed. Rank Math SEO plugin is in use -- schema implementation is feasible without custom coding.	Good
Robots.txt	Correctly configured: all crawlers allowed, only /wp-admin/ blocked, sitemap URL declared. No issues.	Good

GEO Analysis -- 5/10 On Track

GEO (Generative Engine Optimization) covers how well the site performs in AI-powered search engines -- Perplexity, ChatGPT Search, Google AI Overviews, and Gemini -- which synthesize answers and cite sources. These engines reward factual density, named authority, and clean entity signals.

E-E-A-T Assessment

Signal	Finding	Status
Named Experts	Five CEA-registered agents are named with their licence numbers (R055990G, R069651E, R023385H, R070948I, R072836A). This is strong, verifiable expertise signalling.	Good
Agent Credentials Depth	Dennis Lim: 224 transactions, Top 3 achiever 2024-2025. Yeo Tong Boon: NUS Real Estate (Distinction), \$150M+ in transactions, Top 3 Producer 2025. This level of specificity is valuable for E-E-A-T.	Good
Junior Agent Profiles	Kenji Ching, Olivia Neo, and Edmund Lee profiles have thinner content. Olivia Neo's page lacks quantified achievements. Strengthen all profiles to match the Dennis Lim / Yeo Tong Boon standard.	Needs Attention
About Page	Exists and explains the business model, philosophy, and pricing approach. Good foundation but lacks founding story, regulatory background, or industry context that AI engines could cite.	Needs Attention
Contact / NAP Data	Phone (+65 8087 7015), address (125A Lor 2 Toa Payoh), hours (Mon-Sun 9am-9pm), and CEA licence (L3007139C) are all visible on multiple pages. Strong NAP consistency.	Good
Testimonials	Four named testimonials on homepage; additional testimonials on service and agent pages. Names are provided but no link to external review platforms (Google Business Profile, Facebook Reviews) to verify authenticity.	Needs Attention

Press / Awards	No press mentions, media coverage, or industry award citations found anywhere. Even one credible mention (PropertyGuru, EdgeProp, The Straits Times) would significantly boost GEO authority.	Missing
External Review Platforms	No links to Google Business Profile, Facebook Page reviews, or Trustpilot. AI engines cross-reference entity data across platforms -- these links strengthen the brand graph.	Missing

Content for AI Synthesis

Signal	Finding	Status
Value Proposition Clarity	The core proposition -- "save \$10k-\$70k in agent commissions via fixed-fee selling" -- is stated clearly and early on all key pages. AI engines can extract and summarise this confidently.	Good
Factual Density	Specific facts are present: exact fee amounts (\$1,999/\$4,999/\$9,999), CEA licence numbers, transaction counts, savings examples. This is the kind of citable data AI engines prefer.	Good
Savings Statistics	"Average of \$10k-\$70k saved" is mentioned but not substantiated with methodology, sample size, or date range. AI engines -- and discerning readers -- will weight unsupported claims less heavily.	Needs Attention
External Source Citations	Blog posts do not cite HDB, MAS, CEA, or URA data despite discussing regulations (ABSD, TDSR, MOP, SSD). Citing authoritative government sources would significantly improve AI citability.	Missing
Unique Data / Original Research	No original data, transaction price analyses, or proprietary market insights. Publishing even a quarterly "HomeUP Fixed-Fee Savings Report" with real client data would create highly citable content.	Missing
Entity Consistency	The brand is consistently called "HomeUP" across pages. CEA entity C & H Properties Pte Ltd is consistently referenced. Good entity coherence.	Good
Blog Author Identity	"Marcus Lian" is credited as blog author but does not appear in the site's team section. AI engines cannot verify this expert's credentials. Either add Marcus Lian to the team page or attribute articles to a named, profiled agent.	Needs Attention

Technical GEO

Signal	Finding	Status
HTTPS	Site is served over HTTPS -- required baseline for trust signals with search engines and AI crawlers.	Good
Crawlability	Robots.txt allows all AI crawlers. No JavaScript-only rendering barriers detected in fetched content. Site appears accessible to Perplexity, GPTBot, Google-Extended, and similar.	Good
Organization Schema with sameAs	No Organization schema with sameAs links to social profiles. This is how Google, Perplexity, and other AI engines build the brand's Knowledge Graph entity. Implementing this is a high-priority GEO fix.	Missing
Social Profile Links	Footer links to YouTube, Facebook, Instagram, WhatsApp, and TikTok are present in HTML. However, without sameAs schema, these don't fully contribute to the entity graph.	Needs Attention

Author Schema	No Person/Author schema on blog posts. AI engines that generate summaries about Singapore property upgrading cannot reliably attribute expertise to HomeUP without this.	Missing
Google Business Profile	Cannot confirm existence via fetch -- strongly recommended. GBP listing is a primary entity anchor for Google's Knowledge Graph and AI Overviews.	Needs Attention

AEO Analysis -- 4/10 Needs Work

AEO (Answer Engine Optimization) focuses on eligibility for featured snippets, People Also Ask boxes, and voice search -- where a search engine or AI assistant needs to extract a direct, concise answer from the page.

Featured Snippet Eligibility

Signal	Finding	Status
Question-Format H2 Headings	Blog posts use strong question H2s: "What Is the Minimum Occupation Period?", "What Are Bridging Loans in Singapore?", "Why Is Property Flipping Harder Today?". These are AEO-ready headings.	Good
Direct Answer Paragraphs	Question headings are not consistently followed by a concise 40-60 word definition paragraph. Google's featured snippet algorithm favours a tight answer immediately below the question heading. Currently the text flows into longer discussion.	Needs Attention
Definition Patterns	Key terms (fixed-fee agent, MOP, bridging loan, ABSD) are explained within the body text but not in clean "X is defined as..." sentences that snippet algorithms prefer.	Needs Attention
List Content	Numbered process steps and bulleted service inclusions exist on service pages -- well-formatted for list snippets. Blog posts also use H3 sub-structures.	Good
Comparison Tables	HomeUP vs Typical Agent comparison tables appear on all three service pages -- strong table snippet candidates. However, without schema markup, Google cannot easily identify these as structured data.	Good

Structured Answer Formats

Signal	Finding	Status
FAQ Schema	The most urgent AEO gap. All three service pages (Sell HDB, Sell Condo, Sell Landed) have 11-12 FAQs each, covering pricing, process, myths, and comparisons. Implementing FAQ schema on these pages would immediately qualify HomeUP for Google FAQ rich results.	Missing
HowTo Schema	"A Simple, Familiar Selling Process" appears on multiple pages with 4 clearly named steps (Understand Your Situation → Price and Prepare → Market and Manage Viewings → Review Offers and Complete). This is HowTo schema-ready content that is currently unmarked.	Missing
Article / BlogPosting Schema	All three blog posts lack Article schema. Without this, Google cannot reliably identify the author, publication date, or topic -- reducing eligibility for Top Stories and AI-cited answers.	Missing

Speakable Schema	No SpeakableSpecification markup. Not critical for this site type, but value proposition sections ("Fixed Fee. Full Service. Real Savings.") could be marked as speakable for voice results.	Missing
-------------------------	--	----------------

Voice Search Readiness

Signal	Finding	Status
Conversational Language	Blog posts use natural, conversational phrasing aligned with how Singaporeans discuss property upgrading. Phrases like "what most homeowners get wrong" mirror voice query patterns.	Good
Long-Tail Question Coverage	Articles directly address real long-tail questions: "is property flipping still profitable in Singapore?", "what is the MOP for HDB?", "how do bridging loans work in Singapore?". Good AEO foundation.	Good
Local NAP Data	Business address, phone, and hours are consistently present -- key for "near me" and local voice queries.	Good
LocalBusiness Schema	No LocalBusiness schema to mark up the NAP data formally. Voice search assistants (Google Assistant, Siri) rely heavily on this schema to answer "call HomeUP" or "what are HomeUP's opening hours?" queries.	Missing
FAQ Conversational Answers	FAQ answers on service pages are good but tend to run 100-150 words. Voice search answers are typically 29-40 words. Consider adding a brief "direct answer" sentence at the start of each FAQ answer before expanding.	Needs Attention

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Write meta descriptions for every page -- homepage, services, blog, agents, listing	SEO	Low	Critical
Critical	Add FAQ schema to Sell HDB, Sell Condo, and Sell Landed pages (Rank Math supports this natively)	SEO / AEO	Low	Critical
Critical	Add Organization and LocalBusiness schema to homepage -- include sameAs links to all social profiles	SEO / GEO	Low	Critical
Critical	Add canonical tags to every page to prevent duplicate-content dilution	SEO	Low	Critical
High	Add Article/BlogPosting schema with author and datePublished to all blog posts	SEO / GEO / AEO	Low	High
High	Add Open Graph and Twitter Card meta tags site-wide for social sharing previews	SEO	Low	High
High	Add HowTo schema to the 4-step selling process on service pages	AEO	Low	High
High	Fix Articles index page: add keyword-rich H1 and a proper meta title (not "Articles - HomeUP")	SEO	Low	High
High	Add Person schema to all five agent profile pages including CEA licence and transaction data	GEO	Low	High
High	Identify and link to Google Business Profile from the site footer / contact section	GEO	Low	High

Medium	Shorten blog post titles for Property Flipping and MOP articles to under 60 characters	SEO	Low	Medium
Medium	Add external citations (HDB, MAS, CEA, URA) to blog posts to improve AI citability	GEO / AEO	Medium	Medium
Medium	Replace "Marcus Lian" blog authorship with a profiled agent, or add Marcus Lian to the team page	GEO	Low	Medium
Medium	Strengthen Olivia Neo, Kenji Ching, and Edmund Lee agent pages with quantified achievements	GEO	Medium	Medium
Medium	Rewrite Property Listing H1 from "SELL WITH CLARITY" to a keyword-optimised heading	SEO	Low	Medium
Medium	Add concise 40-60 word direct-answer paragraphs immediately below question H2s in blog posts	AEO	Medium	Medium
Medium	Substantiate the "\$10k-\$70k average savings" claim with methodology and sample size	GEO	Medium	Medium
Quick Win	Add "Last updated: [date]" to About, Services, and all service-specific pages	SEO	Very Low	Medium
Quick Win	Add BreadcrumbList schema to service sub-pages and blog posts	SEO / AEO	Very Low	Medium
Quick Win	Link to Google Business Profile, Facebook reviews, or similar from footer to anchor the brand entity	GEO	Very Low	Medium
Quick Win	Write 3-6 new blog articles targeting high-value long-tail queries (e.g. "how to sell HDB after MOP", "ABSD calculator Singapore 2026")	SEO / AEO	High	High

What's Working Well

Strength	Evidence
Exceptional service page depth	Sell HDB (~3,800 words), Sell Condo (~3,400 words), and Sell Landed (~4,500 words) pages are far above average for a local property agency. Each includes a full FAQ section, agent bios, process steps, and comparison tables -- giving Google rich, relevant content to rank.
Keyword-optimised title tags on key pages	Service page titles ("Sell HDB in Singapore for \$1,999 Save Thousands HomeUP") directly target commercial intent queries with price signals included -- a strong differentiator.
Clear, verifiable agent credentials	All five agents are named with their CEA licence numbers (R0XXXXXX format), transaction histories, and ranked achievements. This level of verifiable expertise is rare in the Singapore property space and directly supports E-E-A-T.
Strong NAP consistency	Address (125A Lor 2 Toa Payoh, #02-138), phone (+65 8087 7015), and business hours (Mon-Sun, 9am-9pm) appear consistently across the homepage, service pages, agent pages, and footer.
Educational blog content targeting real pain points	The three published articles address specific, high-intent questions Singapore property owners search for: MOP upgrading, bridging loan confusion, and the obsolescence of property flipping. Question-format H2 headings are AEO-ready.
Clean, crawlable site structure	Robots.txt is correctly configured, all four sitemaps are declared and well-structured, URL slugs are readable and keyword-relevant, and internal linking is consistent across all pages.

Rich FAQ content on service pages	Each service page contains 11-12 FAQs covering the full buyer journey -- from fees and marketing to myths and post-sale planning. Once FAQ schema is applied, these pages are immediate rich-result candidates.
Transparent fixed-fee pricing as a differentiator	Specific price points (\$1,999/\$4,999/\$9,999) are stated prominently across the site. This directness is rare in the industry, aids trust, and gives search engines clear, citable facts to surface in price-related queries.

Glossary

SEO -- Search Engine Optimization

The practice of improving a website so that traditional search engines like Google rank it higher in organic (unpaid) search results. Covers technical factors (page speed, structured data, crawlability), on-page factors (titles, headings, content), and off-page factors (backlinks, authority).

GEO -- Generative Engine Optimization

An emerging discipline focused on making content discoverable and citable by AI-powered search engines like Perplexity, ChatGPT Search, Google AI Overviews, and Gemini. These engines synthesize answers from multiple sources and cite pages -- GEO is about ensuring your site is among those sources.

AEO -- Answer Engine Optimization

The practice of structuring content so that search engines can extract direct answers for featured snippets, People Also Ask boxes, and voice search results. AEO prioritizes question-format headings, concise answer paragraphs, and structured data markup (FAQ, HowTo, Speakable schemas).

Schema Markup

Structured data added to a page's HTML (usually in JSON-LD format) that explicitly tells search engines what the page is about -- whether it's a local business, an article, a FAQ list, or an individual agent. Schema markup is the primary bridge between your content and rich results (star ratings, FAQs, knowledge panels).

E-E-A-T

Experience, Expertise, Authoritativeness, and Trustworthiness -- Google's framework for evaluating content quality. For a property advisory firm, this means demonstrating real transaction history, named qualified agents, verifiable credentials, and consistent trust signals across the web.

End of Report
